Clinical Example Report
Attn: Example Reports
200 Welsh Road
Horsham, PA 19044

Patient Name 0966SP
Patient ID 0966SP
Chain 17001893
Age Not Given DOB Not Given
Gender Not Given
Workorder 17001893
Received 10/04/2017 10:14

Sample ID 17001893-001
Matrix Serum or Plasma
Patient Name 0966SP
Patient ID 0966SP
Container Type Clear vial

Collect Dt/Tm Not Given
Source Not Given

Approx Vol/Weight Not Given

Receipt Notes None Entered

Table with 5 columns: Analysis and Comments, Result, Units, Reporting Limit, Notes

0966SP Cannabis Plus Recent Use Markers, Serum/Plasma

Analysis by High Performance Liquid Chromatography/ Tandem Mass Spectrometry (LC-MS/MS)

Table row for 11-Hydroxy Delta-9 THC: None Detected, ng/mL, 1.0

Synonym(s): Active metabolite of Delta-9 THC
11-OH-THC was detectable in blood, with a 0.5 ng/mL cutoff, for 1.5 (range; 0.25-3.5) hours when cannabis was smoked by occasional users.

In occasional cannabis users, median (range) peak blood concentrations after smoking of 6.9% (50 mg) THC were 1.9 (0.5 - 8.7) ng/mL with median time of maximum concentration at approximately 11 minutes. In chronic, frequent cannabis users, median (range) peak blood concentrations after smoking 6.9% THC were 7.2 (1.9 - 30.9) ng/mL, with median time of maximum concentration at approximately 12 minutes. 11-OH-THC blood concentrations are approximately one-half those of plasma or serum concentrations.

Table row for Delta-9 Carboxy THC: None Detected, ng/mL, 5.0

Results for sample 17001893-001 are continued on next page

Analysis and Comments	Result	Units	Reporting Limit	Notes
<p>Synonym(s): Inactive Metabolite</p> <p>THCC may be detectable, with a 0.5 ng/mL cutoff, over 54 hours in occasional cannabis users and over 72 hours in chronic, frequent cannabis users.</p> <p>Median (range) peak THCC blood concentrations after smoking of 6.9% (50 mg) THC in occasional cannabis users were 7.4 (0.7 - 17.5) ng/mL with median time of maximum concentration at approximately 15 minutes. In chronic, frequent cannabis users, median (range) peak blood concentrations after smoking of 6.9% THC were 50.7 (15.6 - 137) ng/mL with median time of maximum concentration at approximately 15 minutes. THCC blood concentrations are approximately one-half those of plasma or serum concentrations.</p>	None Detected	ng/mL	0.50	
<p>Synonym(s): Active Ingredient of Marijuana</p> <p>In occasional cannabis users, median (range) peak blood concentrations after smoking of approximately 6.9% (50 mg) THC were 44.4 (1.3 - 174) ng/mL with median times of maximum concentration at 6 minutes, decreasing to less than 0.5 ng/mL by 3.5 hours. In chronic, frequent cannabis users median (range) peak blood concentrations after smoking 6.9% THC were 117 (52.8 to 471) ng/mL at approximately 8 minutes. THC may be detectable over 72 hours after smoking in chronic, frequent cannabis users. THC blood concentrations are approximately one-half those of plasma or serum concentrations.</p>	None Detected	ng/mL	0.10	

Analysis by High Performance Liquid Chromatography/
Tandem Mass Spectrometry (LC-MS/MS)

Analysis and Comments	Result	Units	Reporting Limit	Notes
<p>Mean peak CBD plasma concentrations at 3-4 hours post-dose with Sativex® at a low dose (5.4 mg of Delta-9 THC and 5.0 mg of Cannabidiol) were 1.6 +/- 0.4 ng/mL and at a high dose (16 mg of Delta-9 THC and 15 mg of Cannabidiol) were 6.7 +/- 2.0 ng/mL.</p> <p>Following high dose 400 and 800 mg oral synthetic CBD in corn oil administration, mean peak CBD plasma concentrations occurred within 1.5-3 hours post-dose and were 181.2 +/- 39.8 and 221.1 +/- 35.6 ng/mL, respectively.</p> <p>The ratio of blood to serum or plasma concentration is unknown for this analyte.</p>	None Detected	ng/mL	0.10	
<p>Cannabigerol</p> <p>Synonym(s): CBG</p> <p>CBG blood maximum concentrations occurred during smoking, and were approximately 6.9 (range 1.8 to 22.7) ng/mL in frequent and 3.0 (range 1.4 to 8.1) ng/mL in occasional cannabis smokers. CBG was detectable in frequent and occasional smokers for up to approximately 0.5 h after smoking, with a 1.0 ng/mL cutoff.</p> <p>The blood to plasma ratio of CBG is not known.</p>	None Detected	ng/mL	0.10	
<p>Cannabinol</p> <p>Synonym(s): CBN</p> <p>CBN blood maximum concentrations occurred during smoking, and were approximately 11.6 (range 3.1 to 37.9) ng/mL in frequent and 4.0 (range 0.7 to 13.5) ng/mL in occasional cannabis smokers. CBN was detectable in frequent and occasional smokers for up to approximately 1.5 h after smoking, with a 0.5 ng/mL cutoff.</p> <p>The blood to plasma ratio of CBN is approximately 0.8.</p>	None Detected	ng/mL	0.10
