4105U Risperidone and Metabolite, Urine

Analysis by High Performance Liquid Chromatography/ Tandem Mass Spectrometry (LC-MS/MS)

Risperidone None Detected ng/mL 1.0
Synonym(s): Risperdal®

Risperidone is an atypically-structured antipsychotic agent. It is metabolized in the liver to 9-hydroxyrisperidone (also known as Paliperidone), a major active metabolite. Risperidone and 9-hydroxyrisperidone are approximately equally active. Consequently, the clinical effect of the drug results from the combined concentrations of risperidone plus 9-hydroxyrisperidone.

9-Hydroxyrisperidone None Detected ng/mL 1.0
Synonym(s): Risperidone Metabolite

9-hydroxyrisperidone is an atypically-structured antipsychotic agent and the main pharmacologically active metabolite of Risperidone. When administered directly it is commonly referred to as paliperidone. Risperidone and 9-hydroxyrisperidone are approximately equally active.
