Normal range for Zinc Protoporphyrin (ZPP) is 30 – 80 mcmol/mol heme.

ZPP (OSHA Converted Units) 16 mcg/dL 0
This result is converted from mcmol/mol heme assuming a hematocrit of 42% for adults. The conversion factor is mcmol/mol heme x 0.544 = mcg/dL. OSHA occupational threshold is 100 mcg/dL blood.

Specimens for elemental testing should be collected in certified metal-free containers. Elevated results for elemental testing may be caused by environmental contamination at the time of specimen collection and should be interpreted accordingly. It is recommended that unexpected elevated results be verified by testing another specimen in a trace metal free container.
