

FOR IMMEDIATE RELEASE

NMS Labs provides endocrinologists with better diagnostic insights and patient care through tandem mass spectrometry (LC-MS/MS)

WILLOW GROVE, PA, November 18, 2008 – NMS Labs has extended its expertise of tandem mass spectrometry (LC-MS/MS) to the field of endocrinology. Building on over 30 years of scientific excellence, NMS Labs is now helping to set new standards in diagnostic endocrinology testing by using technology that delivers superior specificity and precision.

LC-MS/MS has been in use at NMS Labs for over a decade and is the methodology used for hundreds of diagnostic and toxicological tests. Commonly viewed as the “gold standard” in clinical testing, insights derived from LC-MS/MS tests can lead to earlier intervention, more accurate diagnosis and disease management. Using this “gold standard” makes it easier to test smaller sample sizes, which is important for pediatric patients. Endocrinology testing by LC-MS/MS, can also aid in the diagnosis and treatment of adrenal disorders, Vitamin D deficiency, pituitary dysfunction, sex hormone related abnormalities and many other endocrine disorders.

About NMS Labs:

NMS Labs is a national reference laboratory that is unsurpassed in its scope of tests, accuracy of results, scientific expertise, and innovation. NMS Labs is passionate about promoting public health and safety. For more information on NMS Labs please visit www.nmslabs.com.
