

Neatly bundled and tightly bound . . .

Three levels of lab testing available to the postmortem industry

FOR IMMEDIATE RELEASE

WILLOW GROVE, PA, December 4, 2008 – Busy budget-bound medical examiners and coroners now have three options to meet their specific testing needs. This simplified portfolio of postmortem toxicology testing consists of three levels – Basic, Expanded, and Expert. From the predictable to the more complex case, NMS Labs has provided high-quality choices while remaining true to the client’s budget. All three levels of the postmortem portfolio offer the flexibility of being able to use blood, urine, serum/plasma, tissue, or fluid. And with a streamlined report, postmortem toxicological findings are quickly and easily interpreted and integrated into case management.

“We [NMS Labs] wanted to provide coroners and medical examiners with a service that helps them to get their jobs done in the most effective manner while working within their budgetary constraints,” Rob Middleberg, Ph.D., Vice President, Quality Assurance, Laboratory Director & Forensic Toxicologist at NMS Labs explained. “Our organization has always taken extreme pride in providing death investigators with the most reliable and relevant tests required for their cases with as many options as possible for the greatest utility of these offerings,” added Dr. Middleberg.

About NMS Labs:
