

# Let NMS Labs help you keep up with the ever-evolving abused drug trends

## Introducing 2 new test panels...

### Anabolic Steroids Panel

#### 9305U Anabolic Steroids Panel in urine

Well known for its innovation, NMS Labs has been closely monitoring trends in the use of performance enhancing drugs such as those included in its anabolic steroid panel. The comprehensive and highly specific panel consists of **over 25 steroids** including commonly abused agents, such as oxandrolone, methandienone, stanozolol, nandrolone and boldenone and is ideal for **hospitals, reference labs, researchers, crime labs and others** with the requirement of detecting anabolic steroid use. Testing of these compounds in urine can help to determine if an individual has been exposed to anabolic steroids. These agents have been linked to performance-enhancing properties in competitive sports or other performance-related activities. Please note that NMS Labs is not a WADA lab.

### Hallucinogens Screen - Expanded

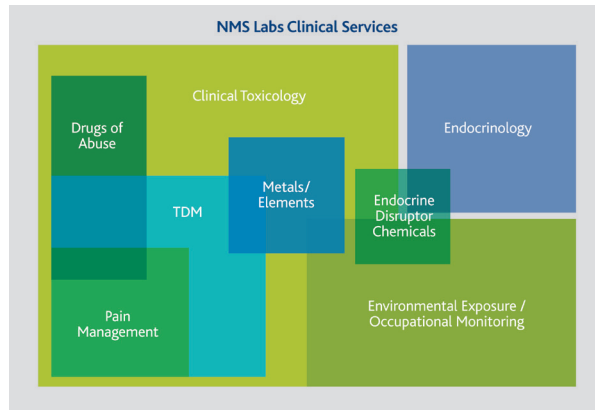

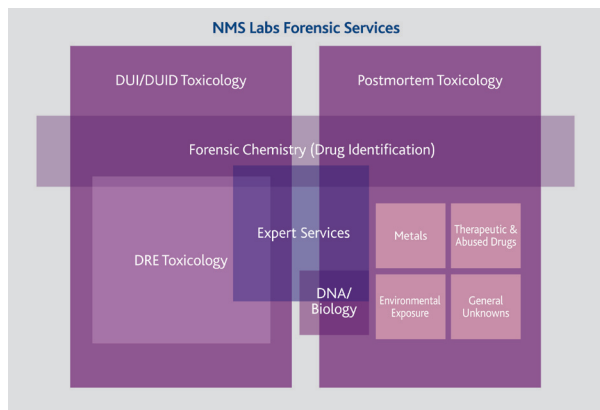

#### 8755B Hallucinogens Screen - Expanded, Blood 8755SP Hallucinogens Screen - Expanded, Serum/Plasma 8755U Hallucinogens Screen - Expanded, Urine

Drug abuse problems among teenagers and other individuals are serious concerns that have created an ever-changing market. With the addition of its Hallucinogens Screen – Expanded panel, NMS Labs can help **hospitals, reference labs, crime labs and others** to determine if an individual has been exposed to hallucinogens. This panel consists of several popular hallucinogens such as ketamine, LSD, MDMA, mescaline, phencyclidine, psilocin and more. **This test is NMS Labs most comprehensive test for hallucinogens.**

Testing also available for abused designer drugs:

- **Synthetic Cannabinoids and metabolites**  
(JWH-018, JWH-073, JWH-250, JWH-019, JWH-081, JWH-122, JWH-200, JWH-210, RCS-4, RCS-8, AM-694, AM-2201)
- **“Bath Salts”** (MDPV, Mephedrone)
