Reference Comments:

1. Ethanol (Ethyl Alcohol) - Urine:

   Ethanol (beverage alcohol) is a central nervous system depressant. It causes impairment of cognitive, perceptual and psychomotor capabilities manifested as decrements in alertness, judgment, perception, coordination, response time and sense of care and caution. Potential effects on driving include, but are not limited to, weaving, crossing center or fog lines, failure to obey traffic signals, wide turns, inappropriate speed for conditions, and involvement in collisions.

   Analysis performed in duplicate by, internally standardized, headspace Gas Chromatography (GC). The average of the two headspace GC results is reported.

   NMS Labs is an approved Laboratory for Alcohol analysis in the Commonwealth of Pennsylvania.

   I certify that:
   I directly participated in the determination of the results by reviewing and certifying that the analytical data including internal standards and calculations utilized in reporting the results of this case are accurate and correct.

Sample Comments:

001 I certify that NMS Labs has taken custody of the evidentiary material, and that all specimen integrity seals were in order.

Analysis Summary and Reporting Limits:
