Analysis and Comments	Result	Units	Reporting Limit	Notes
-----------------------	--------	-------	-----------------	-------

1693SP Dimethyltryptamine, Serum/Plasma

Analysis by Gas Chromatography (GC)

Dimethyltryptamine	None Detected	ng/mL	10	
--------------------	---------------	-------	----	--

Synonym(s): DMT; Component of Ayahuasca

Peak plasma concentrations ranged from 12 - 26 ng/mL (mean, 16 ng/mL) at 1.5 hours after a 29 mg oral dose of an herbal tea.

Pheniramine and phencyclidine interfere with dimethyltryptamine in this analysis. The presence of pheniramine and phencyclidine will adversely affect the quantitation of dimethyltryptamine. If pheniramine or phencyclidine are potential interferents in this case, call the laboratory for alternate quantitative procedures.

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.
