2492R Lead, RBCs

Analysis by Inductively Coupled Plasma/Mass Spectrometry (ICP/MS)

Lead	1.1	mcg/dL	0.55	
------	-----	--------	------	--

NMS Labs derived data:
10th - 90th Percentile Data:
Mean, 3.1 mcg/dL +/- 1.3 (SD); range, 1.1 - 6.9 mcg/dL
(N = 26).

The RBC sample used for analysis was measured by weight and multiplied by the density of human RBC (1.10 g/mL)

Specimens for elemental testing should be collected in certified metal-free containers. Elevated results for elemental testing may be caused by environmental contamination at the time of specimen collection and should be interpreted accordingly. It is recommended that unexpected elevated results be verified by testing another specimen in a trace metal free container.

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.
