2543B Lurasidone, Blood

Analysis by High Performance Liquid Chromatography/
Tandem Mass Spectrometry (LC-MS/MS)

Lurasidone	5.0	ng/mL	2.5	
Synonym(s): Latuda®				

Following single dose administration of 40 mg and 80 mg, the mean Cmax values in serum were approximately 54 and 64 ng/mL, respectively. Following steady-state administration of 40 mg and 80 mg, the mean Cmax values in serum were approximately 48 and 79 ng/mL, respectively.

Peak serum concentrations and absorption occur in approximately 1 to 3 hours. Steady-state concentrations are reached within 7 days of initiation of therapy. The elimination half-life is approximately 18 hours.

The white blood cell (WBC) count should be monitored periodically, because agranulocytosis, leukopenia, and neutropenia have been reported during clinical trials.

The ratio of whole blood concentration to serum or plasma concentration is unknown for this analyte.

Results for sample 11003309-001 are continued on next page
