200 Welsh Road
Horsham, PA 19044

Patient Name 2800B
Patient ID 2800B
Chain 17002242
DOB Not Given
Sex Not Given
Workorder 17002242

Received 12/12/2017

Lab ID 17002242-001
Matrix Blood
Patient Name 2800B
Patient ID 2800B
Container Type Clear vial

Collect Dt/Tm Not Given
Source Not Given

Approx Vol/Weight Not Given

Receipt Notes None Entered

Analysis and Comments	Result	Units	Reporting Limit	Notes
2800B Lisdexamfetamine as Metabolite, Blood				
Analysis by High Performance Liquid Chromatography/ Tandem Mass Spectrometry (LC-MS/MS)				
Amphetamine	None Detected	ng/mL	5.0	
Synonym(s): Lisdexamfetamine Metabolite				
In children, the mean plasma Amphetamine concentrations approximately 3.5 hours following 30 mg, 50 mg and 70 mg of Lisdexamfetamine were 53 ng/mL, 93 ng/mL and 134 ng/mL, respectively.				
In healthy adults, the mean (+/-SD) steady-state plasma concentrations of Amphetamine following 70 mg of Lisdexamfetamine given once daily ranged from a peak of 90+/-30 ng/mL to a trough of 18+/-14 ng/mL.				
The whole blood/plasma concentration ratio for Amphetamine was determined to be 0.6 at a blood level of 500 ng/mL and 1.0 at 5000 ng/mL.				

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.
