8091U Drugs of Abuse (11 Panel) and Alcohol Screen, Urine (Forensic)

Analysis by Headspace Gas Chromatography (GC)

Ethanol None Detected mg/dL 10
Synonym(s): Ethyl Alcohol

Ethyl alcohol (ethanol, drinking alcohol) is a central nervous system depressant and can cause effects such as impaired judgment, reduced alertness and impaired muscular coordination. Ethanol can also be a product of decomposition or degradation of biological samples.

Methanol None Detected mg/dL 5.0
Synonym(s): Methyl Alcohol

Methanol is contained in paints, cleaners, windshield washer fluid, 'canned heat', and other household products. It may be consumed for its intoxicating properties which are similar to ethanol; however it is much more toxic. In addition to central nervous system depression with its associated slowing of reaction time, lethargy and confusion, methanol can cause blindness due to its toxic metabolites.

Isopropanol None Detected mg/dL 5.0
