Table with 5 columns: Analysis and Comments, Result, Units, Reporting Limit, Notes. Rows include Turinabol, Tetrahydrogestrinone, Trenbolone Metabolite, Testosterone, Epitestosterone, and Testosterone / Epitestosterone Ratio.

A T/E ratio less than 4.0 is considered normal, while a ratio greater than or equal to 4.0 is considered an abnormal finding suggestive of testosterone use/abuse. This cut-off for the T/E ratio is recommended by the World Anti-Doping Agency.

Analysis by Colorimetry (C)

Table with 5 columns: Analysis and Comments, Result, Units, Reporting Limit, Notes. Row for Creatinine with population statistics for U.S. Population, Males, and Females.

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.
