9317SP Lidocaine and Metabolite (MEGX) Screen, Serum/Plasma

Analysis by Gas Chromatography (GC)

Lidocaine	None Detected	mcg/mL	1.0	
Synonym(s):	Xylocaine®			
Comment:	Substance(s) known to interfere with the identity and/or quantity of the reported result: Diphenhydramine			

Lidocaine is an amide type of anesthetic that is used as a topical and injectable analgesic, antiarrhythmic, and in resuscitative efforts. It is also used as a 'cutting' agent in some drugs of abuse, especially cocaine.

Reported antiarrhythmic range: 2-5 mcg/mL.

Monoethylglycinexylidide (MEGX)	None Detected	mcg/mL	0.50	
Synonym(s):	Lidocaine Metabolite

MEGX (monoethylglycinexylidide) is an active metabolite of lidocaine.

Following a Lidocaine I.V. infusion at rates varying between 20 and 50 mcg/min/kg, steady-state MEGX serum concentrations range from 0.2-5.2 mcg/mL.

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.
